

The background features a complex, abstract geometric design. It consists of various overlapping shapes, including triangles and polygons, in shades of green, blue, and yellow. Some areas contain horizontal or diagonal stripes, while others are solid colors. The overall effect is a dynamic, modern, and tech-oriented aesthetic.

# 5G New Thinking: Orkney Network

**David Crawford & Greg Whitton**  
**28<sup>th</sup> October 2021**

# Key 5GNT Project Aims

**5G New Thinking** aims to **empower rural communities to take control of their connectivity.**

- ❑ We will do this by **developing a 5G community network deployment toolkit** that communities and/or local, non-mainstream network operators can make use of in order to...
- ❑ **...design, build, and operate commercially viable and sustainable mobile or FWA networks** in areas which none of the mainstream MNOs are serving (i.e. full not-spots) or in areas which one or more, but not all, of the mainstream MNOs are serving (i.e. partial not-spots) and / or in areas where home broadband falls significantly below government minimum guidelines.

# The 5GNT Consortium

Co-funded by:

Department for  
Digital, Culture,  
Media & Sport

Lead Partner

Principal: Engineering / R&D

Spectrum Sharing

Rural Deployment

R&D

Broadcast & on-line safety

Private Finance

5G NR Technologies

Civic Lead Partner

Scotland Integration

Managed Telco Services

BenCom / Cooperative

Emergency Network & MNOs

Health and Welfare Tech Lead

Scottish/English Border

Animal Management

Private Fibre Networks

Agri-Technology Lead

# Toolkit for Private Community Networks

# Building Private 5G Networks

- Aims and ambitions
  - Why do you \*need\* 5G?
  - What use cases do you envisage?
- Biz Models, Funding, Finance
  - Strategy
  - Target markets, service offerings
  - Revenue models
  - Investors, grant funding, subsidy schemes
- Legals
- Radio Spectrum
  - RF surveys to identify vacant bands onsite
  - Shared spectrum?
  - Sub-leasing from MNOs
- Understanding of Tech eco system
  - UE band capabilities
  - Radios, core networks, edge capabilities
- Network design
  - Macro/ small cell
  - RF coverage simulations
  - Identify most optimal basestation sites
  - Landowner negotiation
  - Planning permission
  - Backhaul network design, L2/L3 and fibre
  - Cellular traffic routing, VPNs
  - Resulting estimated CAPEX/OPEX costs (feed back to biz model)

# Building Private 5G Networks

- Procurement
  - Masts, power, fibre, site office, land
  - 5G radios, antennae, 5G stack servers
  - 5G core, edge user plane servers
  - 5G UEs
  - SIM cards
- Build and Maintenance
  - Civils, logistics, cranes, rigging team
  - 5G RAN and Backhaul network commissioning
  - Network “bring up”
  - Network testing
  - SIM card enrolment
  - Ongoing network health monitoring
- Pre-roll out
  - Billing
  - Customer management
  - Subcontracted maintenance services
  - Customer sign up?
- Go live

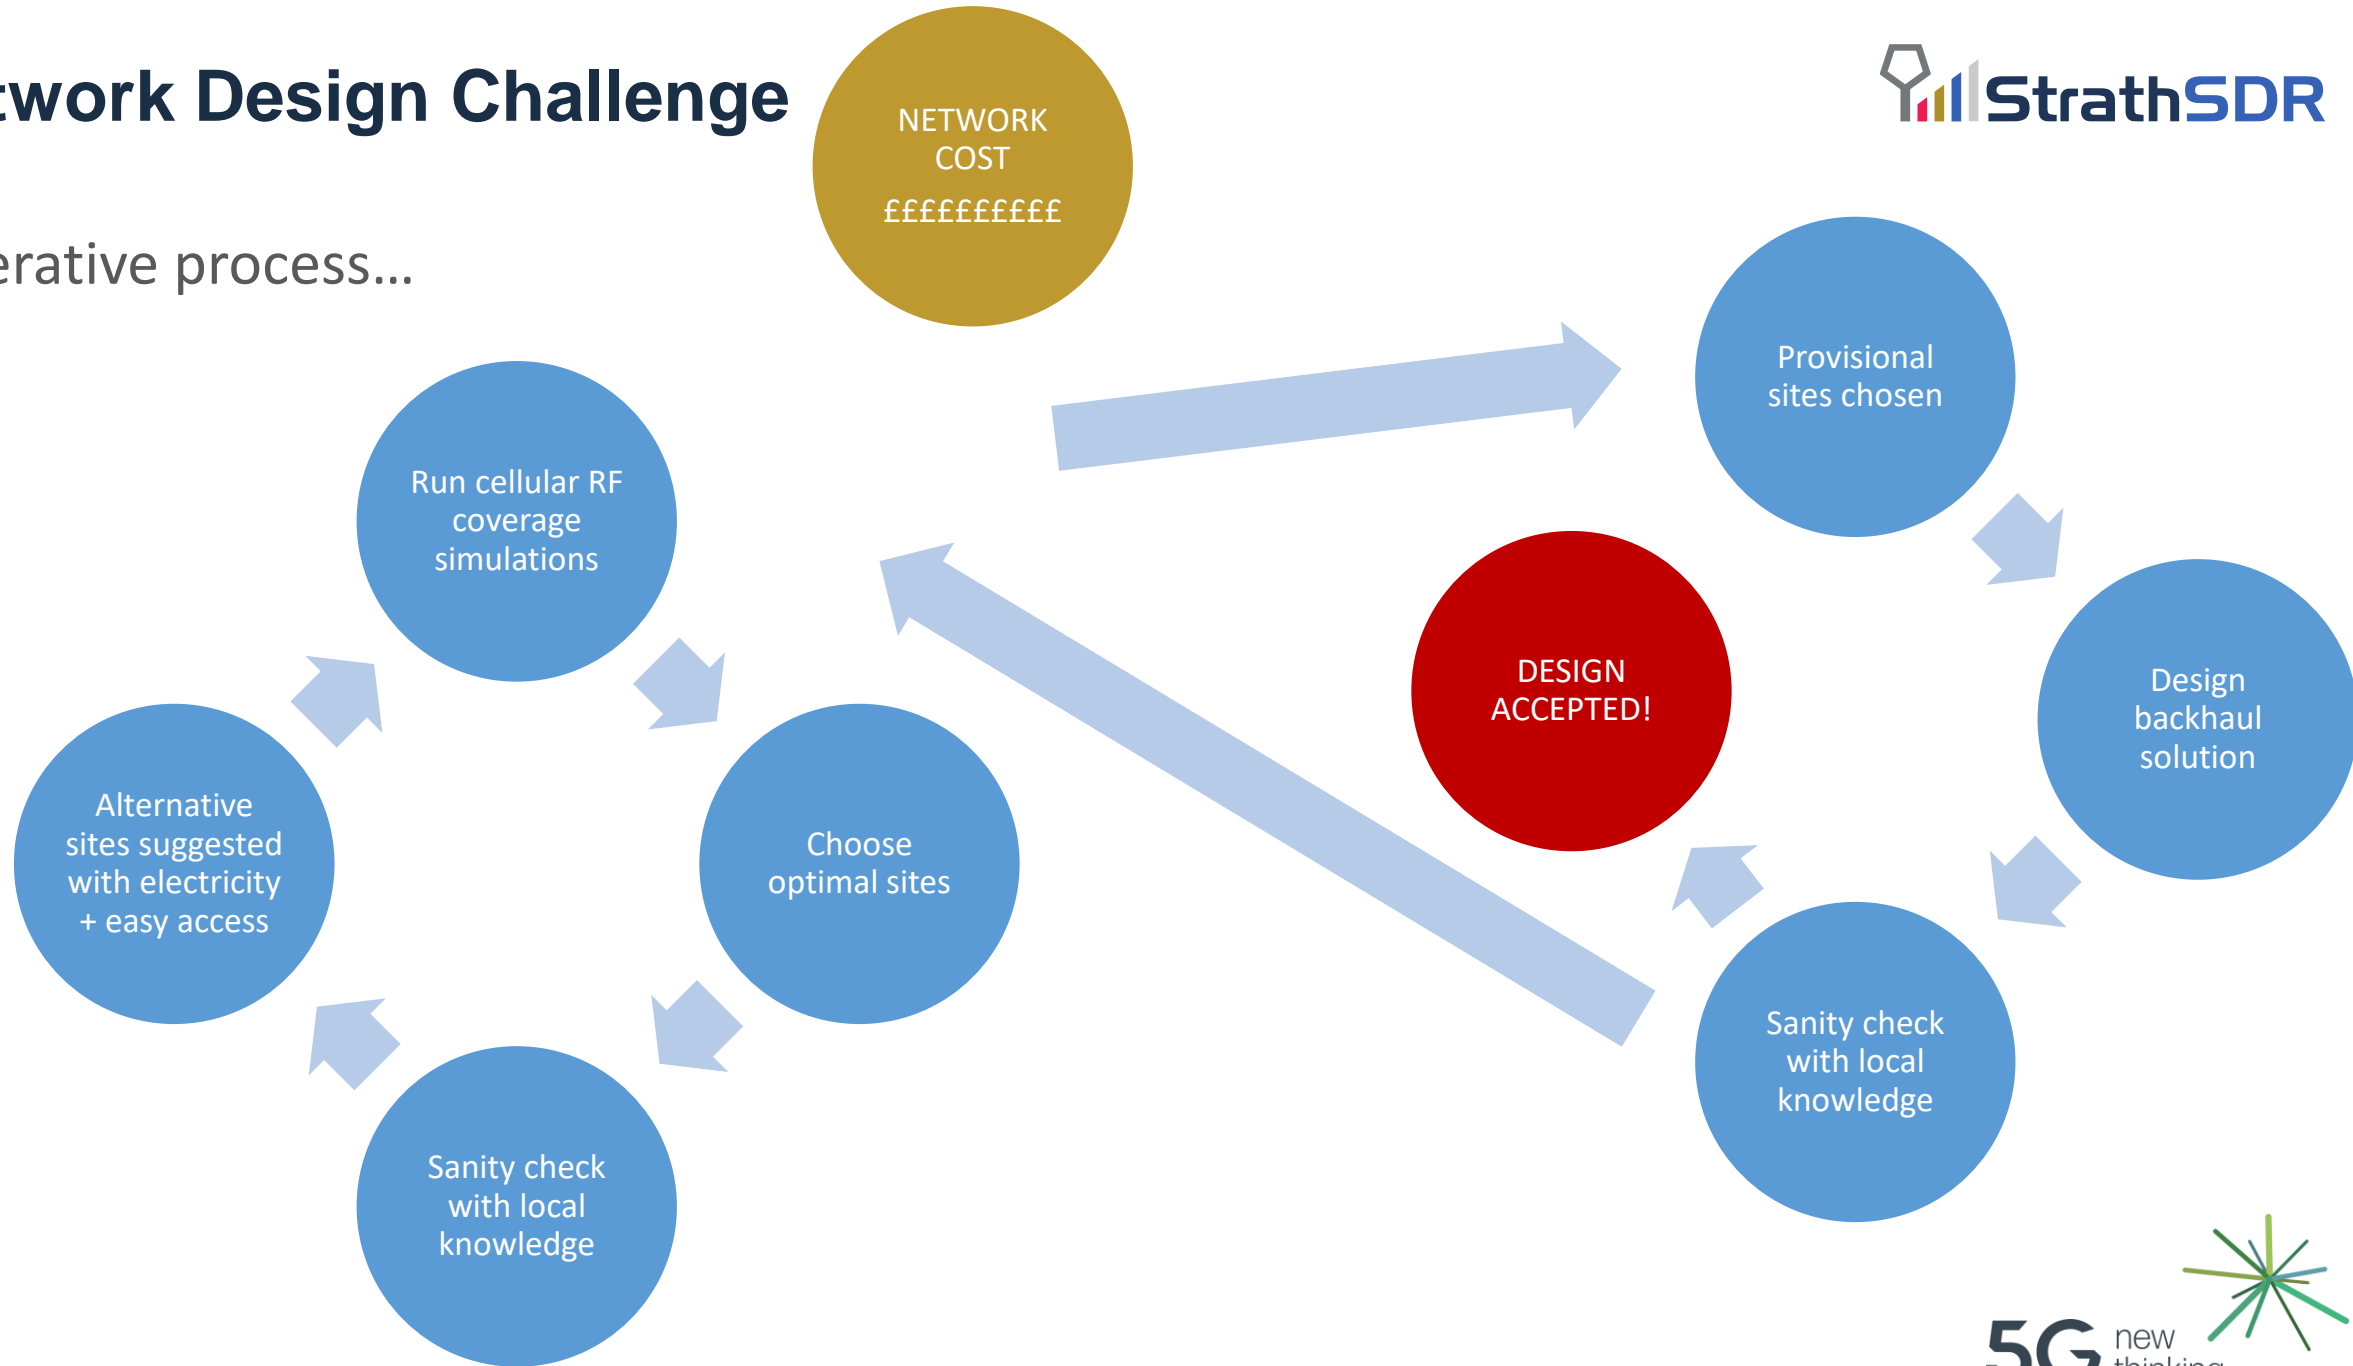

# Orkney Testbed Locations

- Some of the most remote islands in Orkney
- Population densities can be as low as **5 inhabitants per km<sup>2</sup>**
- Residents currently live with fixed **broadband speeds <2Mbps DL**
- Patchy 4G coverage from **single MNO**, patchy 2G from others
- Linked to Wave 1 Rural project

# Network Design Challenge

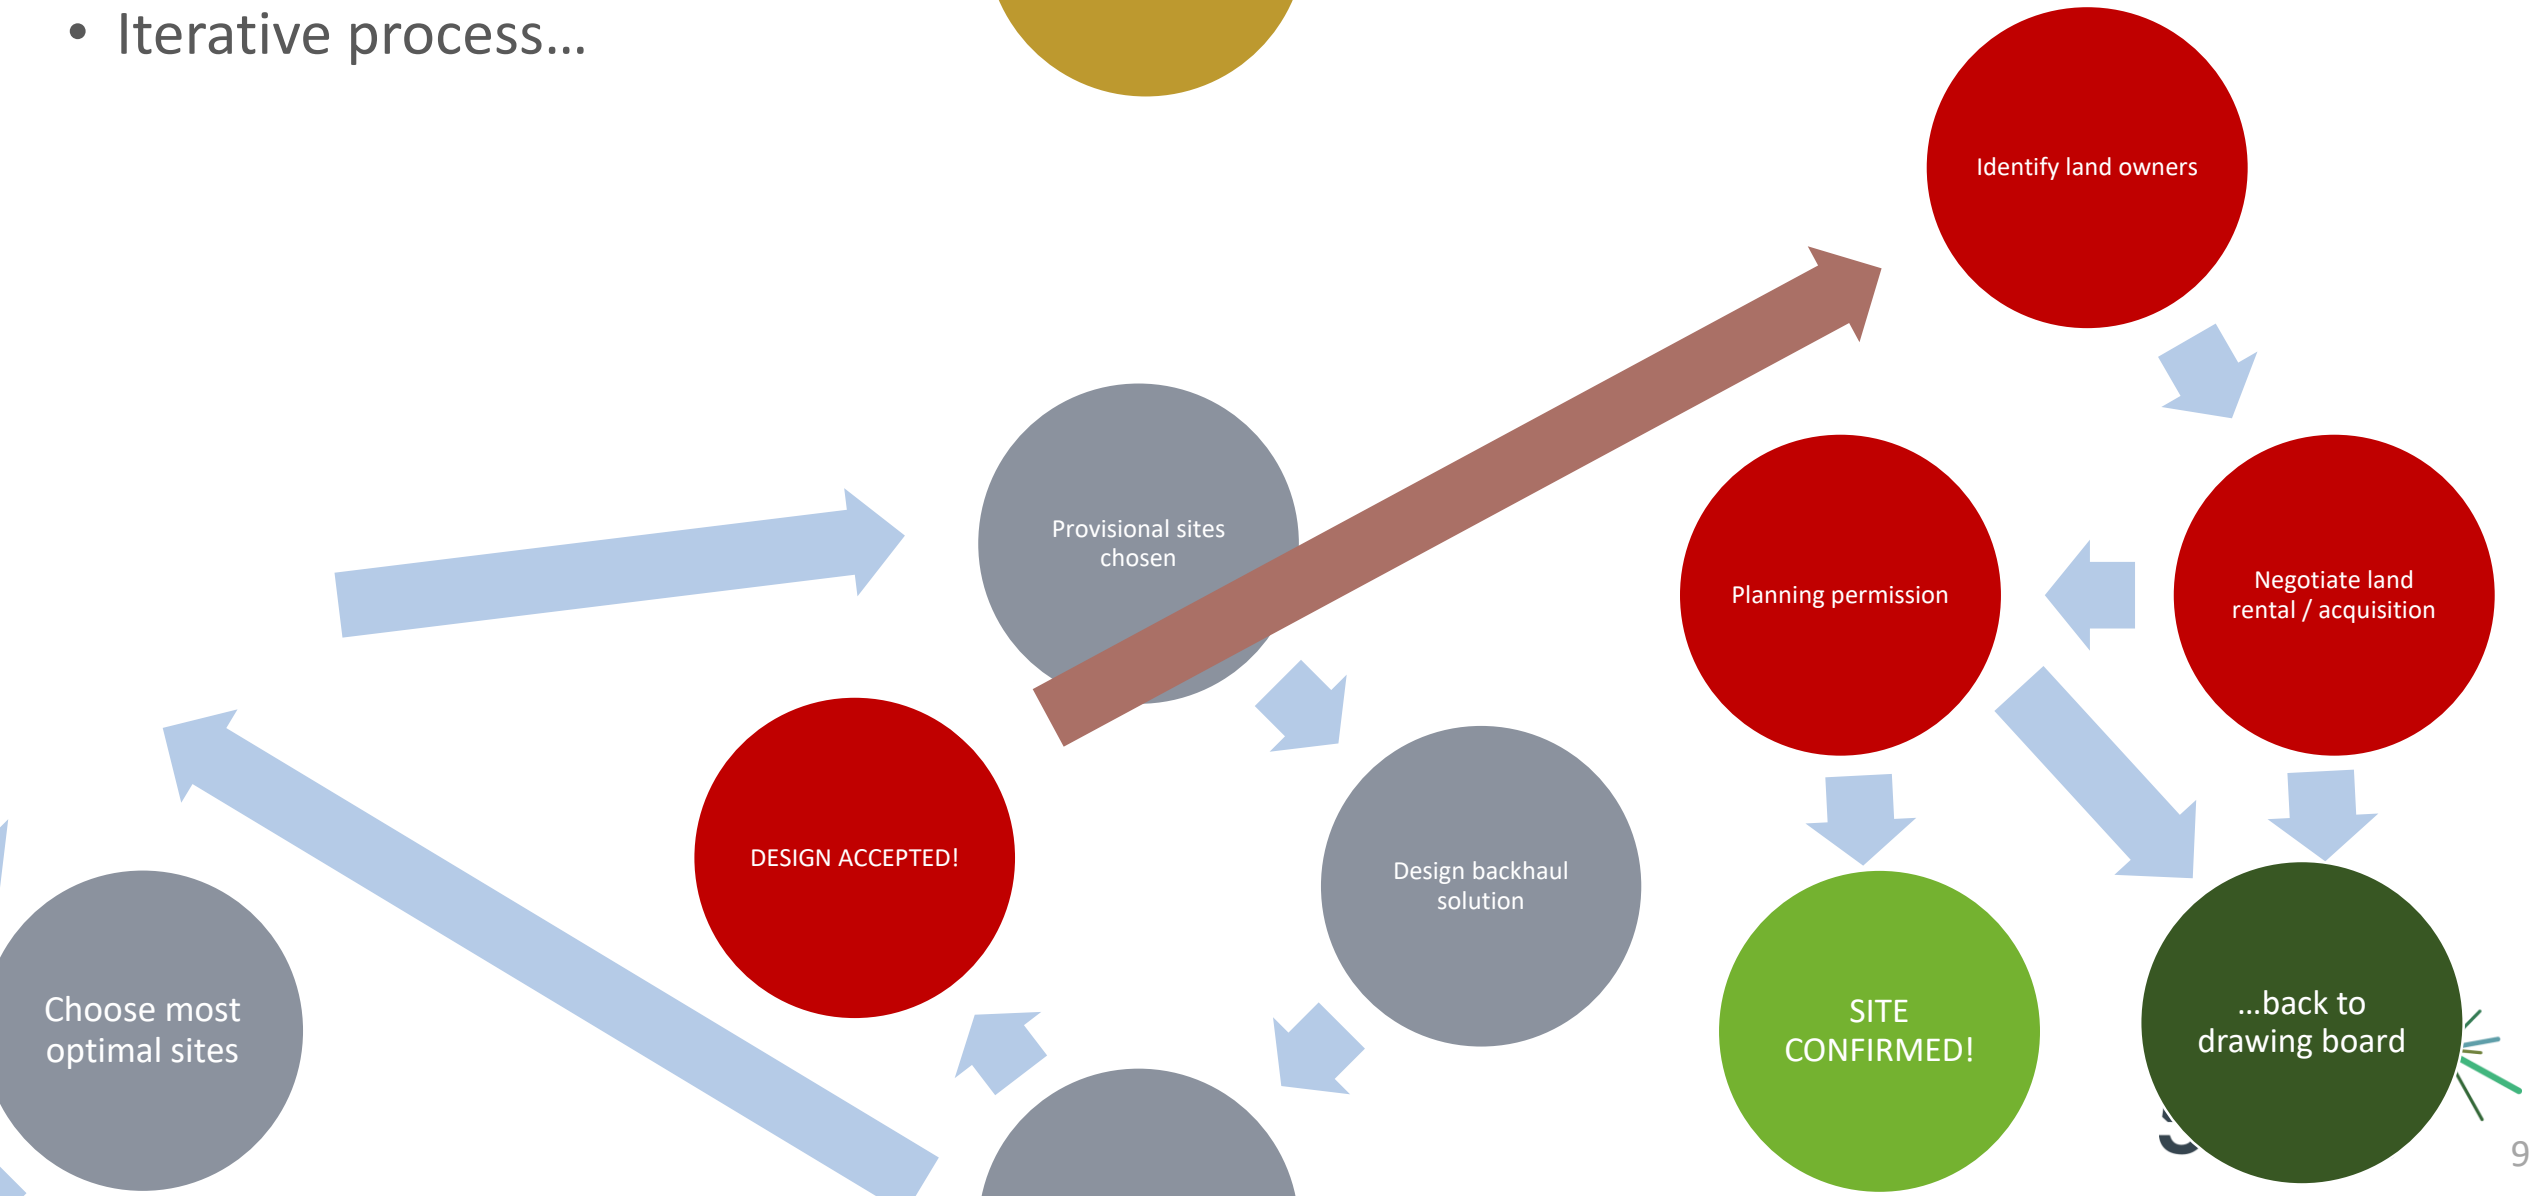

- Iterative process...

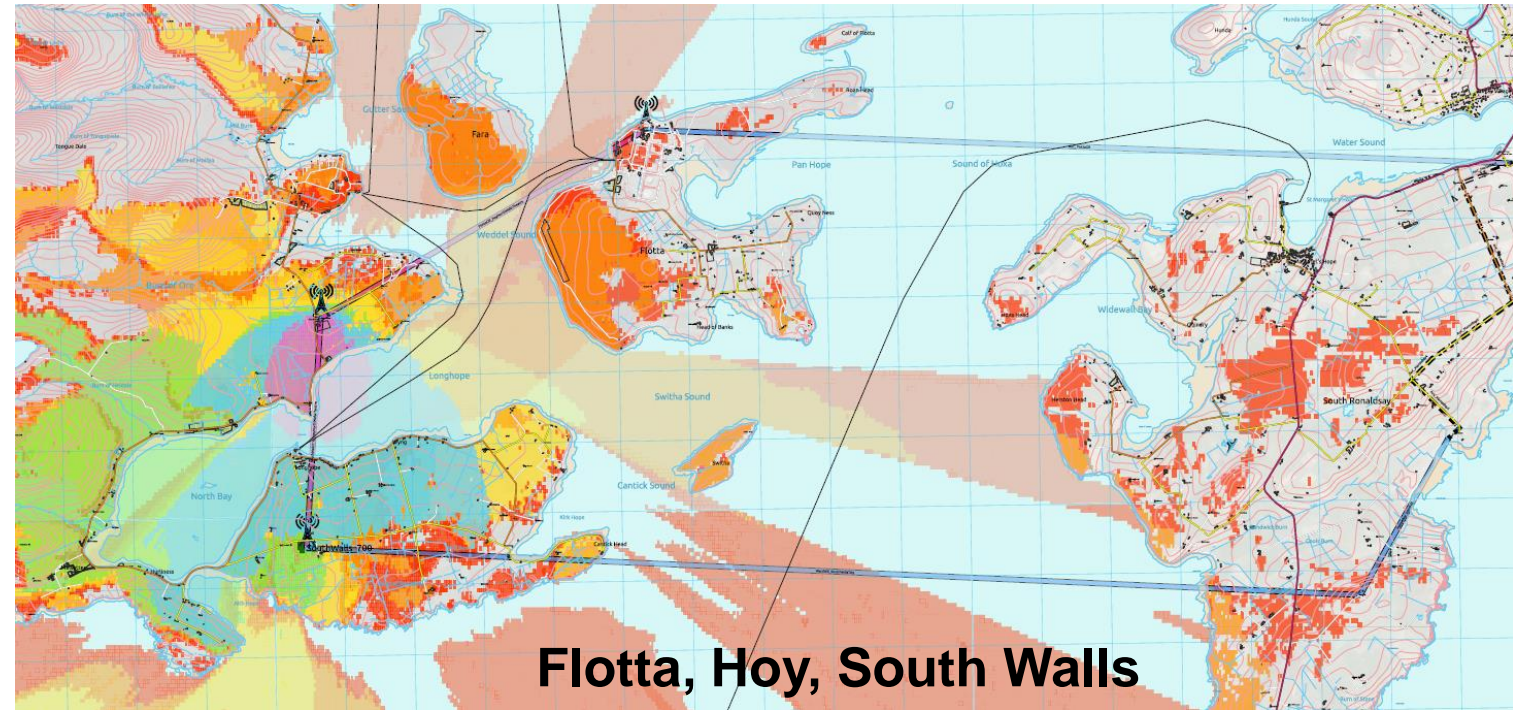

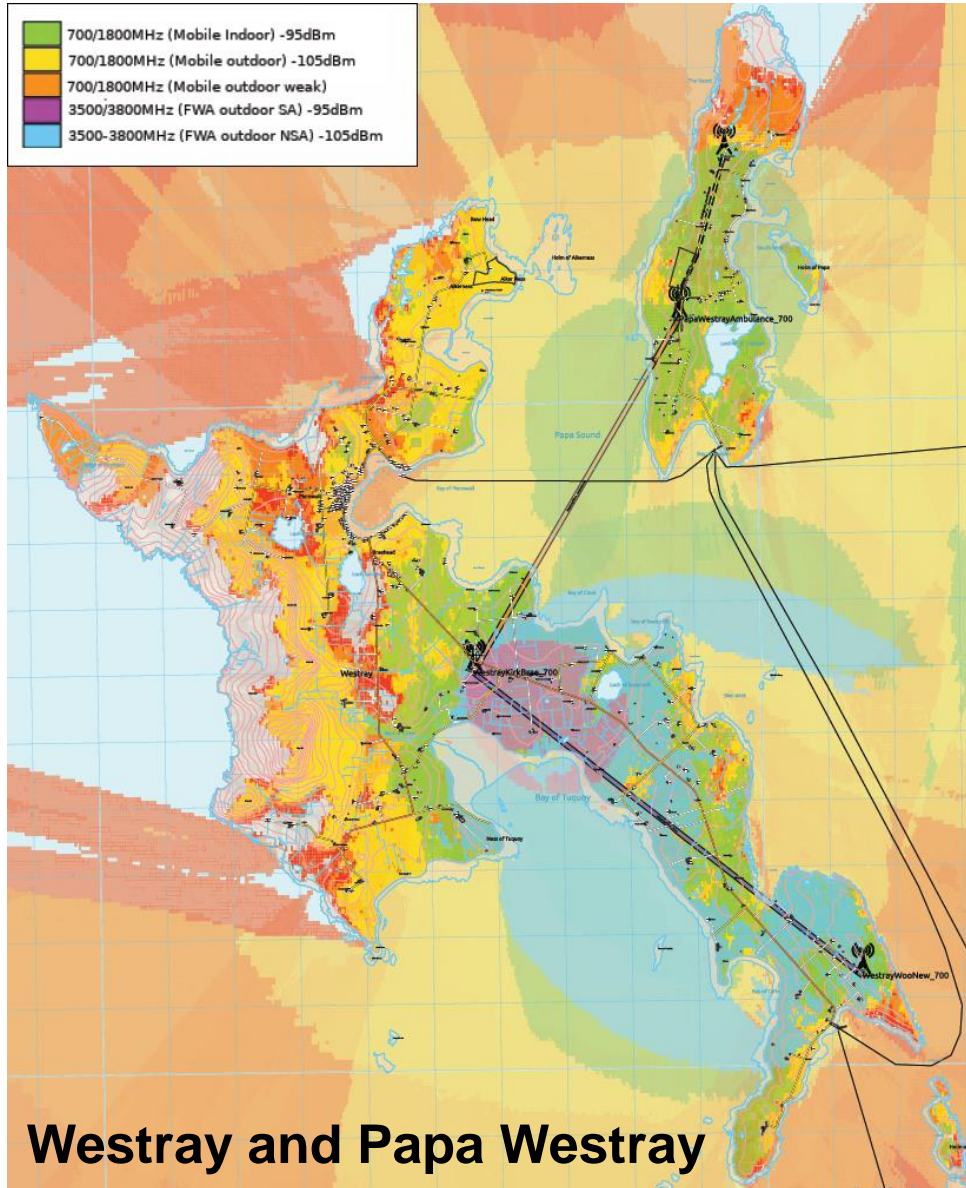

# Network Design Challenge

- Iterative process...

- Eventually aim to end up with
  - Network design for **\*coverage\*** (likely a compromise, not the best RF solution)
  - Landowner agreement
  - Planning permission submitted and accepted(....basically means your network is good to go)
  
- Identify potential customer base
  - Contention calculations, work out if additional radios are required for **\*capacity\***
  
- Get quotes, complete CAPEX BOM, make the decision about whether to proceed

# Network Design

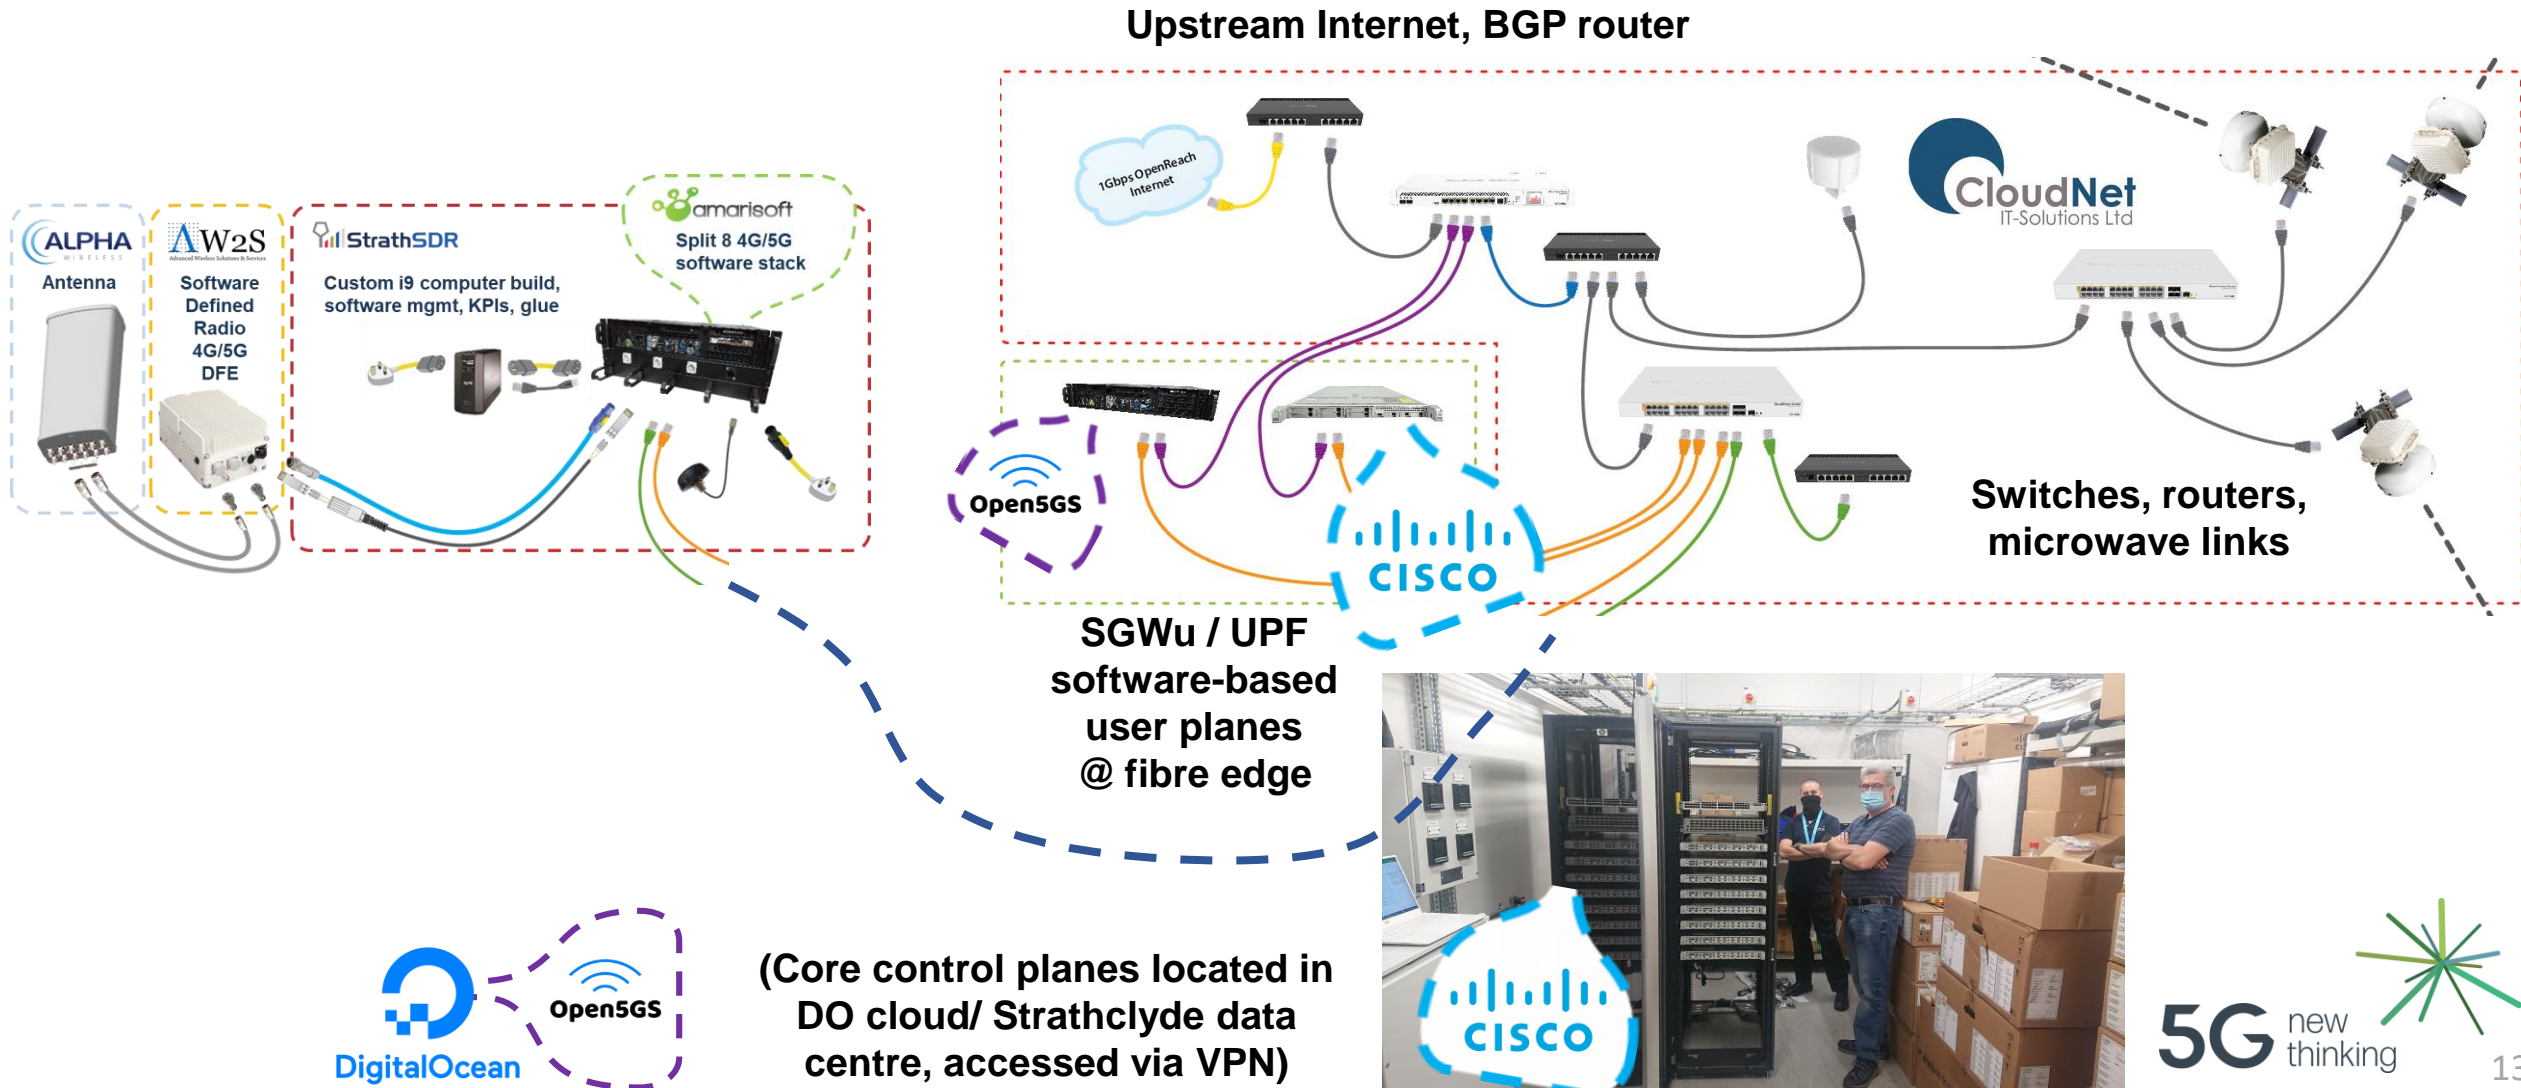

# Network Design

- 5GNT basestation site:
  - Mix of “COTS” hardware, specialist equipment and software

# Network Design

- Backhaul and core equipment:

# Equipment Procurement and Commissioning

*Procurement*

*Custom computer  
build + software  
orchestration*

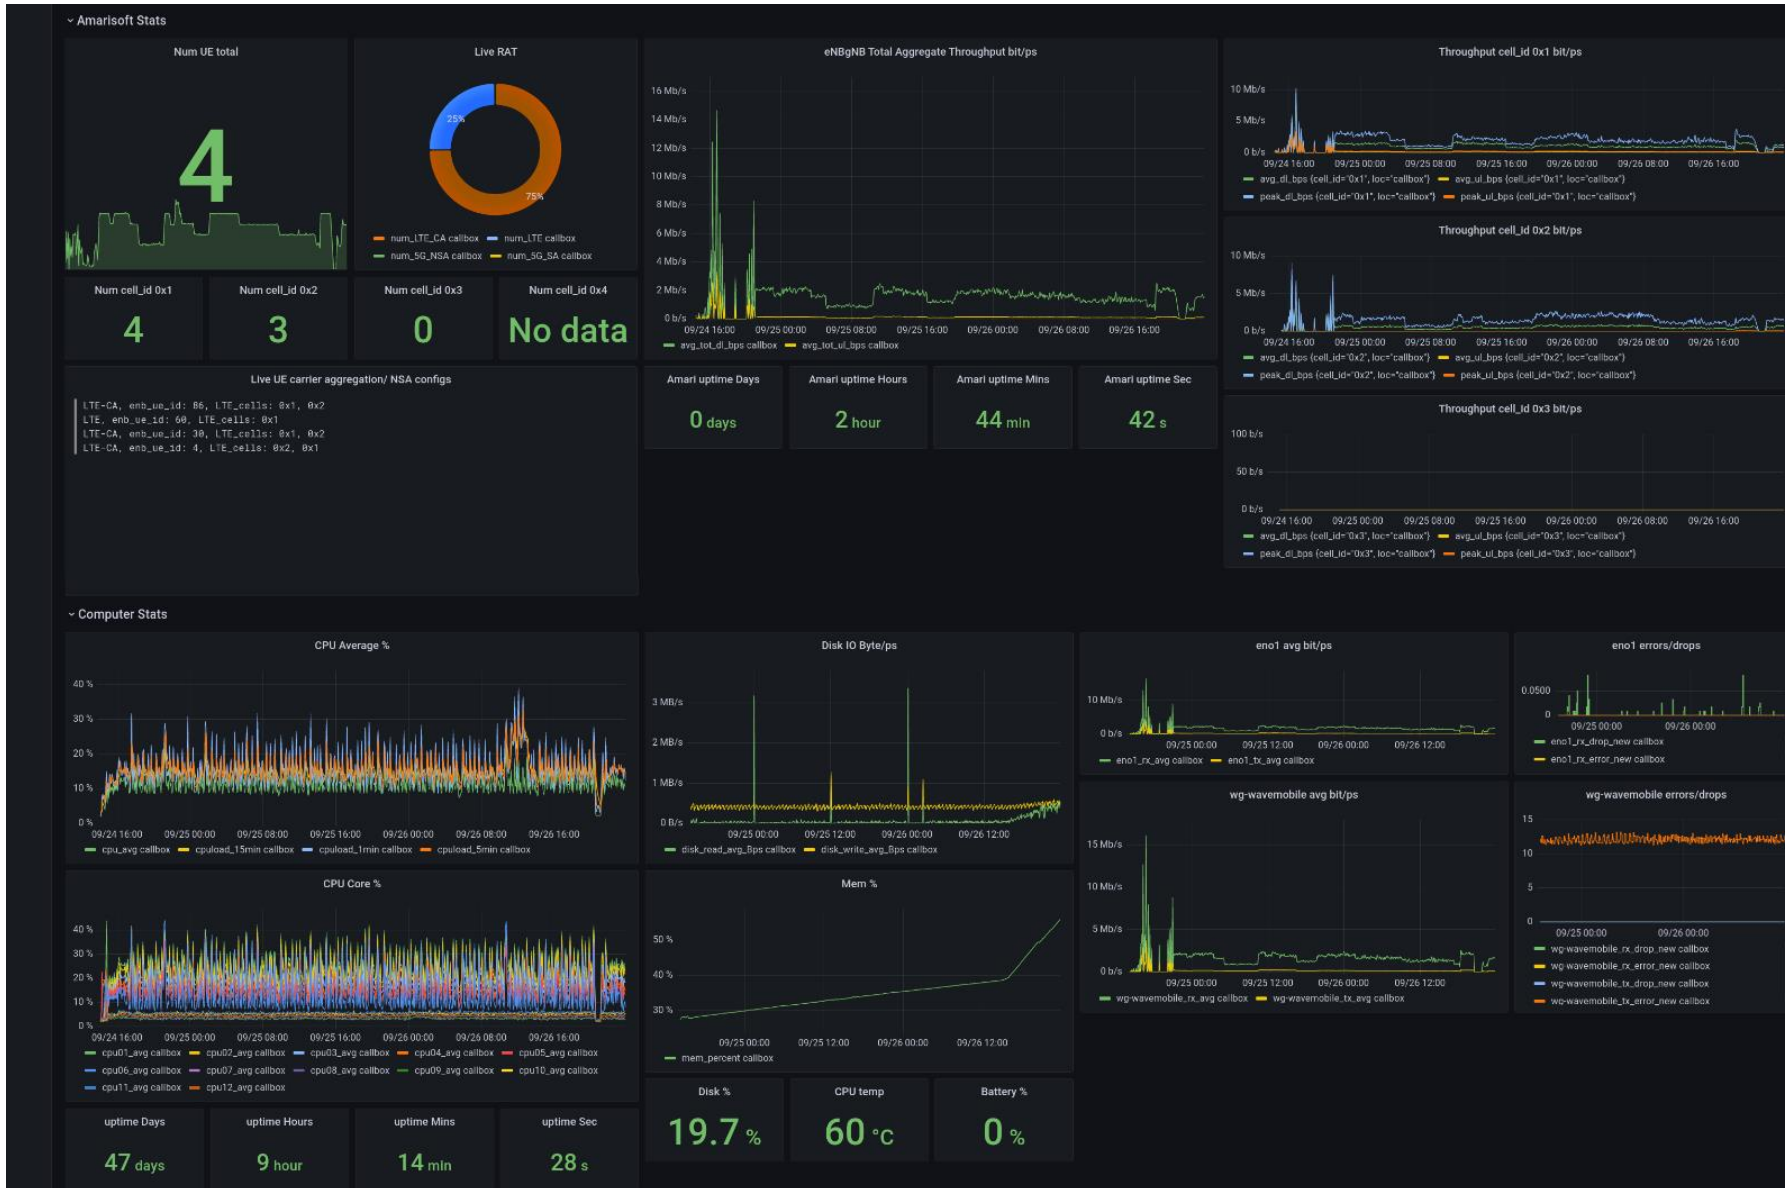

*Custom Component  
Assembly*

*Lab testing*

# Network Monitoring

## Planning Permission

## Ducting and fibre runs

## Civils

# Network Build

*Logistics*

*Rigging  
+ installs*

*Initial  
Testing*

Thank You
